Purpose: To make more cultures, plates of 6.4, 8, 10.5, 20, 29 kb.

Plated quite a few for each at diff. conditions.

These are grown under stronger conditions in the presence  
of Tef + Kan.

Used Army plates, kept at 37° over night.

6.4, 8.0 - colonies were small, especially 6.4

Same each time whenever I did. I don't remember how  
they were last timeBut looked ok - well spread out  
bigger colonies.

Aberd. Mem. all at 4°.

picked a few single colonies from 6.4 & 8.0  
grew them again for fresh minipreps. grown under  
Kan + Tef conditions.From 8.0 - did miniprep by alkaline lysis method, suspended in  
15 µl of TE  $\times$  12 = 180 µl Total.

6.4 was stored at 4°.
